

WORLD WATER DAY

This year's United Nations theme is:

Water and climate change and how the two are inextricably linked

March 23, 2020

9:00 - 10:30 AM

2nd Floor Atrium

Legislative Office Building

Hartford, CT

Adapting to climate change's impacts on our waters now will protect public health and save lives, and using water more efficiently will reduce greenhouse gas emissions. Everyone has a role to play - and we cannot afford to wait.

Please join us in bipartisan support for our precious water resources alongside legislative water champions, youth from local schools, and environmental organizations.

Light refreshments will be provided.
